Google Summer of Code 2020 & 2019 | Frontend developer |

New Delhi

Summary

Software Developer working with frontend technologies for 2+ years. I enjoy working with React and I am familiar with Redux along with good knowledge about the fundamentals of the web. I am a big advocate for Open Source Software. I have contributed to many open-source organisations like The Tor Project, Mozilla and Systers. I currently operate in an agile workflow and am very familiar with how best this works with the development process as well as a general level of knowledge around sprinting, retrospectives and issues/ tickets.

I am currently looking for opportunities as a front end engineer.
